

PROJECT IDEA

Paedimed is a health promotion project based on a resource oriented salutogenic health concept.

By specific measures, individuals shall be enabled to increase their control over their own health status and to improve their health actively. This concept focuses on the resources of individuals and not on risk factors.

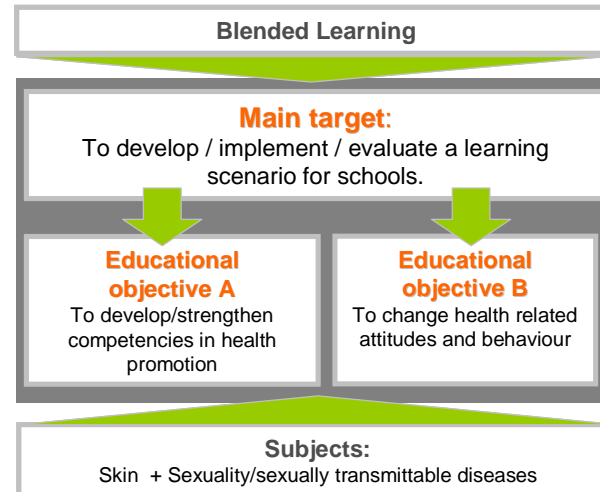

Health promotion has not yet been implemented in Europe in a sufficient manner. For this reason, partners from the fields of health and education in Germany, Italy and Romania have joined forces to support this concept.

PROJECT TARGETS

The aim of *paedimed* is to develop, implement and evaluate a web-based learning environment for schools. This learning environment will focus on the subjects of skin / skin diseases and sexuality / sexually transmittable diseases.

The intention of the project is to enable the target groups to acquire competencies and attitudes which will help them to stay healthy.

In this environment, learning will be understood as an active and constructive process that does however require instructional help and social support.

Within a Blended Learning Concept, e-learning, presence learning and other forms and methods of learning will be integrated by means of systematic media use and a step-by-step concept adaptable to individual conditions.

PROJECT PARTNERS

The project team is interdisciplinary and international, consisting of partners from the medical field (dermatology, social medicine) and from the educational field (media education, health education).

Participating countries in the *paedimed* project are Germany, Italy and Romania.

Germany

- University Hospital of Heidelberg, Department of Clinical Social Medicine (coordination)
Prof. Dr. med. TL Diepgen, M.A. E Deimling,
Dr. CJ Apfelbacher MSc
- University of Augsburg, Institute of Media and Educational Technology
Prof. Dr. G Reinmann, Dipl.-Päd. F Adler,
B.A. V Herzog
- University of Osnabrück; Dermatology, Environmental Medicine and Health Theory
Apl. Prof. Dr. rer. nat. Britta Wulfhorst
- Occupational Association of German Dermatologists (BVDD, Bavaria)
Dr. med. R Ehlert, Dr. med. N Stosiek

Italy

- Centro Studi GISED (Gruppo Italiano di Studi Epidemiologici in Dermatologia)
Dr. L Naldi, Dr. D Linder

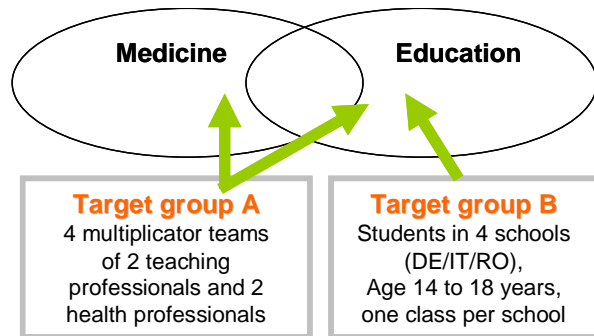

Romania

- University of Oradea, Department of Microbiology
Prof. Dr. med. H Blenk

Technical development (project website, learning environment): <http://www.ghostthinker.de>

TARGET GROUPS

Target groups are the content multipliers on one side (i. e. health professionals and teachers), and the pupils or students on the other side.

The learning environment, once developed, will run as a test version in four schools in Germany, Italy and Romania.

These are the participating schools:

Neumarkt/Germany

- Staatliche Berufsschule Neumarkt
- Hauptschule Weinbergerstraße

Venice/Italy

- Liceo Classico Marco Foscarini Venezia

Oradea/Romania

- Nationalkollegium "Mihai Eminescu"
